Configuring your Windows 8 or 10 Computer for RemoteApp

To configure your Windows 8 or 10 computer to connect to the College of Engineering RemoteApp, please follow the instructions below:

1. Click the Windows icon in the lower left corner and search for RemoteApp. Open the application.

2. If you have any previously installed College of Engineering RemoteApp connections, remove them by clicking remove.

3. Make your new connection by clicking on “Access RemoteApp and Desktops”.

4. In the Connection URL window, enter the following, then click next: https://rdweb.engr.washington.edu/rdweb/feed/webfeed.aspx
5. You will receive a dialog confirming the connection is ready to set up:

![Connection确认界面](image1)

6. Next you’ll be prompted for a username and password. Use your UW NetID username and password in the format shown:

![输入凭证界面](image2)

7. After successful authentication, you will receive a confirmation the connection has been made:

![连接成功界面](image3)

Click Finish.
8. Then, click the Windows icon and look for “College of Engineering RemoteApp”.

9. Click the icon and you will see a list of all the software packages available.
10. Click on a program to run it.
11. You will see a warning dialog asking you to verify that you trust the publisher of the RemoteApp program you’re trying to run. Check the box for “Don’t Ask Again” as indicated, and click Connect:

12. When asked for your username and password, use the same information you used in step 5 above:

13. You’ll see a “Connecting to” dialog like the one below:
14. You will see a warning stating that “The identity of the remote computer cannot be verified. Do you want to connect anyway?” Click “Don’t ask me again for connections to this computer” as indicated below, then click “Yes”:
